Preface – Guide for Interpretation

As a guide to the interpretation and application of this chapter, the public policy of this state is declared to be as follows:

Economic insecurity due to unemployment is a serious menace to the health, morals, and welfare of the people of this state. Involuntary unemployment is therefore a subject of general interest and concern which requires appropriate action by the legislature to prevent its spread and to lighten its burden which now so often falls with crushing force upon the unemployed worker and the worker's family. The achievement of social security requires protection against this greatest hazard of our economic life. This can be provided by encouraging employers to provide more stable employment and by the systematic accumulation of funds during periods of employment to provide benefits for periods of unemployment, thus maintaining purchasing power and limiting the serious social consequences of poor relief assistance. The legislature, therefore, declares that in its considered judgment the public good, and the general welfare of the citizens of this state require the enactment of this measure, under the police powers of the state, for the compulsory setting aside of unemployment reserves to be used for the benefit of persons unemployed through no fault of their own. (Iowa Code 96.2)

Executive Summary

This report evaluates the status of Iowa's unemployment compensation trust fund as of December 31, 2018. It reviews fund expenditures and revenue. It also discusses fund solvency in terms of fund balance, fund balance adjusted for inflation, fund balance adjusted for covered wage growth, and months of benefits in the trust fund.

Unemployment Insurance (UI) Benefits Payout: The national recession pushed regular benefits paid to unemployed workers to a record level of \$788 million in 2009. Benefits declined to \$365 million in 2018. Some other facts:

- First payments climbed to 165,030 in 2009 due to increased layoffs caused by the recession. First payments declined as the economy recovered. The 2018 first payment level of 74,064 was the lowest since 1998.
- Average duration of benefits increased from 11.6 weeks in 2008 to 15.6 weeks in 2009 and 15.3 weeks in 2010. Average duration has declined to 12.8 weeks in 2018.
- The benefit payout has stabilized in 2012 through 2017 averaging \$414 million per year. Benefits fell to \$365 million in 2018, the lowest payout since 2007.

UI Trust Fund Revenue: Fund revenue primarily comes from UI contributions paid by Iowa employers. Contributions reached \$657 million in 2011 due to record UI payouts in 2009 and 2010. Contributions declined through 2015 as fund strength improved.

- The average contribution rate stayed around 1.6 percent in 2003 through 2009. This is well below the average rate during the 1980s which reached 3.4 percent in 1984.
- Record payouts in 2009 and 2010 caused the trust fund balance to decline. Rate tables 3 and 4 were triggered for 2010 through 2012. The average contribution rate was 2.2 percent in 2010, 2.7 percent in 2011 and 2.4 percent in 2012.
- The trust fund balance has been sufficient to trigger table 6 or 7 for 2014 through 2018. The average tax rate ranged from 1.3 percent to 1.7 percent during this period.

UI Trust Fund: The philosophy guiding this fund requires balances to be large enough to endure heavy demands during periods of high unemployment, yet not place an excessive burden on employers. The challenge is to determine adequate reserves to ensure the fund's solvency through an economic downturn. The Iowa UI employer contribution system automatically adjusts employer contribution rates based on the strength of the UI trust fund and historical UI benefit experience.

Iowa's year-end combined trust fund balance reached \$865 million in 2008. Record benefit payouts caused the year-end combined fund balance to plummet to \$446 million in 2010. The fund bounced back and climbed to \$1.3 billion by the end of 2018.

Conclusions: Iowa's combined fund balance fell to \$321 million during April 2010, but the fund balance has rebounded through 2018. Benefit payout levels have stabilized over the last six years. Fund solvency measures have rebounded to pre-recession levels, contribution rate tables have stabilized and the trust fund should be sufficient to withstand a benefit payout similar to the 2009 economic downturn.

UI Trust Fund History at a Glance

The national recession pushed the UI benefit payout from \$330 million in 2007 to \$788 million in 2009 and \$587 million in 2010.

UI benefits have declined to between \$400 million and \$425 million in 2012 through 2017.

The benefit payout fell to \$365 million in 2018, the lowest level since 2007.

The recession caused the trust fund to decline and the average contribution rate reached 2.7 percent in 2011.

The trust fund balance recovered and tables 6 and 7 were in effect during 2014 through 2018. The five year average contribution rate declined to 1.5 percent.

The average contribution rate for 2018 was 1.3 percent.

UI benefits exceeded contributions by more than \$400 million during 2009, the largest one year deficit in the Iowa UI trust fund history.

Contributions generally exceeded benefits in the 2011 through 2018 post recession period. This enabled the trust fund to rebuild and contribution rates to decline.

UI Trust Fund History at a Glance

Record UI benefit payouts caused the combined fund balance to drop sharply in 2009 and 2010.

The fund balance grew through 2018, but the CPI adjusted fund balance grew at a slower rate.

Fund balance growth rate is expected to level off in 2019 as benefits payouts and contributions stabilize.

The UI fund as a percentage of covered wages was over 3.0 percent during the first half of the 1990's. In 2002 through 2008 the trust fund was around 2.0 percent of covered wages. This measure dropped to 1.1 percent of covered wages in 2010, but it rebounded and exceeded 2.0 percent in 2013 through 2018.

The highest benefit payout adjusted for covered employment and wage growth occurred during the 1982-1983 recession.

The trust fund would be sufficient to pay benefits for about ten months if a similar recession were to occur today.

A. Unemployment Insurance Benefits

The national recession caused Iowa's Unemployment Insurance benefit payout to reach a record level of \$788 million in 2009. Benefit payments decreased as the national economy improved. The benefit payout declined to \$403 million and in 2017 and \$365 million in 2018. This is the lowest benefit payout since 2007.

UI Benefits: Benefits payments are a function of:

- average weekly benefit amount,
- duration of benefits, and
- number of persons receiving first payments for benefits

Maximum Weekly Benefit Amount:

The maximum weekly benefit (MWB) is computed each year based on the previous year's average weekly wage. The current MWB amounts are listed below:

Number of Dependents	Average Weekly Wage 2017	Percent of Average Weekly Wage	Maximum Weekly Benefit July 2018
0	\$882.26	53%	\$467
1	\$882.26	55%	\$485
2	\$882.26	57%	\$502
3	\$882.26	60%	\$529
4	\$882.26	65%	\$573

Average Weekly Benefit (AWB):

Claimants' weekly benefit amounts are based on their high quarter earnings, subject to the above maximums. About half of claimants draw the maximum weekly benefit. A claimant would need high quarter earnings of about \$10,700 to qualify for the maximum weekly benefit.

The AWB growth rate rose sharply in 2009 due to layoffs in higher paid industries then declined in 2010 and 2011. The average weekly benefit grew by about 3.7 percent per year from 2012 through 2018. The 2018 average weekly benefit was \$385.19.

Duration of UI Benefits: The maximum duration of UI benefits in Iowa is 26 weeks. In the case of a plant closing, it is extended to 39 weeks.

The economic slowdown increased the number of long-term unemployed and the average benefit duration in 2009. This figure has declined as the economy improved. The average duration decreased from 15.6 weeks in 2009 to 12.8 weeks in 2018.

First Payments: The number of UI claimants who received their first payment for a new benefit year reached a record high in 2009. The number of first payments decreased each year through 2018 as the employment situation improved.

Weeks Compensated: The number of weeks of UI benefits compensated declined to 946,846 in 2018. This signifies the lowest level since 1999.

UI Benefit Summary: The number of new layoffs has declined from 2009 through 2012. This caused UI benefit payments to fall from a record high of \$788 million in 2009 to \$417 million in 2012. Benefit paid leveled off during 2012 through 2017 and declined to \$385 million in 2018.

The UI benefits cost rate fell from 1.90 percent of covered wages in 2009 to 0.62 percent in 2018. This represents the lowest benefit cost rate since 1999.

B. Unemployment Insurance Revenue

Fund revenue fell from 2011 through 2015 primarily due to triggering rate tables with lower contribution rates as the trust fund balance recovered from record payouts. Contribution rates have stabilized during 2015 through 2018.

Average Contribution Rate: The Iowa Code has eight rate tables. Rate tables are triggered based on the relative trust fund strength. The average contribution rate ranges from about 3.5 percent in Table 1 to about 0.9 percent in Table 8.

The average contribution rate was over 3.0 percent during in the 1980's as the trust fund was rebuilding from the early 1980's recession. The fund balance grew enough to trigger the lowest rate table in the late 1990's.

The contribution rate averaged about 1.6 percent from 2003 through 2009. Record benefit levels caused the trust fund to fall in 2009 and 2010. This caused rate tables with higher contribution rates to trigger. The average contribution rate rose to 2.7 percent in 2011.

Higher contribution rates and a lower benefit payout enabled the trust fund rebound. The trigger formula moved to rate tables with lower tax rates.

Rate table 6 was in effect during 2014, 2016 and 2017 with an average contribution rate of 1.6 percent. Rate table 7 was in effect during 2015 and 2018 with an average contribution rate of 1.3 percent.

Individual Employer Rates: Even though the average contribution rate was 1.3 percent, contribution rates for individual employers rates ranged from zero to 7.5 percent in 2018.

Iowa's contribution rates are based on each individual employer's benefit experience. About 48 percent of private employers qualified for a zero rate because they had low benefit charges over the last five years.

Taxable Wages: During 2018, Iowa employers paid contributions on the first \$29,900 of each employee's wages. This taxable wage base is updated each year based on the average annual covered wage.

The national recession caused a decrease in taxable wages in 2009. Covered employment, and wage levels have rebounded since 2010 causing taxable wages to grow by about 4 percent per year.

Contributions: Lower contribution rate tables have triggered since 2011 due to a rebound in the UI trust fund. Contributions reached a record high of \$657 million in 2011 and then fell to \$382 million in 2015.

Relative fund strength declined and table 6 was triggered for 2016 and 2017. This caused receipts to rise to \$484 million in 2017, but fall to \$416 million in 2018 as a stronger trust fund balance triggered rate table 7.

Interest: Interest received from the federal government on the trust fund totaled to \$25 million in 2018.

Revenue Summary: Contributions accounted for 96 percent of trust fund revenue since 2010.

C. UI Fund Balance

The year-end combined trust fund balance was \$865 million in 2008. Recession level benefit payouts caused the fund to fall to \$446 million in 2010. A reduction in UI benefits combined with an increase in employer contributions enabled the combined fund to rebound to \$1,250 million in 2017 and \$1,325 million in 2018.

Trust Fund Balance History: The lowest historic year-end trust fund balance was a deficit of \$126 million in 1983. The fund grew rapidly from this low to \$562 million in 1990. This growth was caused by lower levels of insured unemployment and some of the highest average contribution rates in trust fund history.

Trust fund growth slowed during the 1990's, as higher trust fund balances triggered tax rate tables with lower average contribution rates.

The fund reached \$810 million in 2000. Economic conditions caused the year-end fund balance to fall in 2001 through 2004. The number of new layoffs declined and UI benefits paid were lower in 2005 through 2008. This enabled the combined trust fund balance to rebound to \$865 million in 2007 and 2008.

UI benefits began to increase during 2008 and UI benefits paid reached record levels during 2009 and 2010. This caused the combined trust fund to fall to \$447 million at the end of 2010, the lowest fund level in more than 20 years. The fund rebounded to \$1,250 million in 2017 and \$1,325 million in 2018.

Effect of Wage Growth: Examining the trust fund balance in terms of absolute dollar amounts can be misleading. The fund balance must grow as covered wages and covered

employment grow in order to keep pace with potential fund liabilities.

CPI Adjusted Fund Balance: One method of adjusting the fund balance to account for inflation is to use the Consumer Price Index (CPI) to adjust the fund to 1982-1984 dollars. Using inflation adjusted dollars the 2018 fund balance is 13 percent higher than the 2000 fund level.

Fund Balance as a Percent of UI Covered Wages: The UI fund is expressed as a percentage of covered wages in order to control for employment and wage growth. The contribution rate table formulas use 2.0 percent of covered wages as a minimum safety factor.

This indicator grew to exceed 3.0 percent of wages in early 1990's. It then gradually decreased to around 2.0 percent in 2002 through 2008.

Record benefit payouts caused this percentage to decline to 1.1 percent in 2010, but it has rebounded and grown to 2.3 percent in 2018.

UI Trust Fund Balance Summary: The year-end fund balance dropped to \$447 million in 2010 due to high benefit payouts. The trust fund has rebounded \$1,325 million in 2018.

The trust fund balance as a percent of covered wages has improved from 1.1 percent in 2010 to 2.3 percent in 2018.

D. UI Fund Solvency

Unemployment Insurance theory requires the trust fund balance be large enough to endure heavy demands during periods of high unemployment, yet not place an excessive burden on employers. The challenge is to determine an adequate reserve level to ensure the fund's solvency through an economic downturn.

Months of Benefits in Trust Fund:

The fund balance is sufficient to pay benefits for 44 months at the current payout. This measure is deceptive because it does not consider the effects of an economic slowdown.

Months of Benefits at High Cost:

The 2018 trust fund balance would be sufficient to pay benefits for only ten months at the highest historic adjusted benefit payment level.

Federal Solvency Standard: This solvency measure uses the benefits paid for highest three calendar years during the last 20 years or three recessions. The recommended level is 12 months of benefits. The Iowa trust fund has 19 months using this measure. Currently 2009, 2010 and 2002 are included in the calculation. This method excludes the farm crisis recession of the early 1980's.

Recession Level Benefits: Iowa's highest benefit cost level is based on the 12-months ending April 1983. Benefits totaled \$317 million and wages totaled \$11.6 billion. Benefits paid equaled 2.7 percent of wages. If an economic downturn had pushed 2018 benefits to the April 1983 level, benefits paid would have reached \$1.55 billion.

Rate Table Calculations: The Iowa UI rate system is designed to automatically adjust contribution rates based on fund strength. This system

is designed to maintain solvency while reducing rate fluctuations. If the fund strength starts to decline, the formula will trigger a rate table with higher contribution rates. This helps the fund start rebuilding before fund reserves reach a critical point. The system is designed to fortify the trust fund in small increments. This method diminishes the chances of a drastic contribution increase in any single year.

The national recession caused the fund balance to fall to the lowest level in 20 years. This lower fund balance caused rate tables 3 and 4 to trigger in 2010 through 2012, the highest rate tables since 1988.

The trust fund strength has improved and over the last five years. This enabled rate tables 6 or 7 to trigger for 2014 through 2018.

State Loans: Iowa's unemployment rate was below the national average during the "great recession" and Iowa's trust fund remained solvent. Over 30 states needed to borrow funds from the federal government in order to pay UI benefits

Fund Solvency Summary: UI benefit payments have declined and trust fund solvency measures have rebounded to pre-recession levels. The trust fund should be sufficient to withstand a benefit payout similar to the 2009 economic downturn.

The UI Trust Fund balance excludes Reed Act distributions, except for amounts transferred to the trust fund under Iowa Law. The Iowa Reserve Fund refers to the principal in the unemployment compensation reserve fund set up to under S.F. 458 (2003). Principal in the fund can only be used to pay UI benefits if the UI trust fund is insufficient to pay benefits.

Appendix C: Definition and Technical Notes

UI Fund Balance Measures

This report measures the condition of the funds designated to pay unemployment compensation benefits. In the past, unemployment compensation benefits have been paid entirely from the Unemployment Trust Fund. In 2003 the Iowa legislature set up the Unemployment Compensation Reserve Fund in the state treasury to pay benefits if the UI Trust Fund balance is insufficient. Since both funds are available to pay benefits, this report uses the combined balance of the two funds to compute solvency measures.

Unemployment Trust Fund: A fund established in the Treasury of the United States which contains all monies deposited by state agencies to the credit of their unemployment fund accounts and federal unemployment taxes (FUTA) collected by the Internal Revenue Service.

UI Trust Fund Balance (available for benefits): In this report this term refers to the balance in Iowa's individual account in the Unemployment Trust Fund which is available to pay UI benefits.

Iowa Reserve Fund: This refers to the principal in the Unemployment Compensation Reserve Fund created in the state treasury under S. F. 458 in 2003. Monies in the reserve fund shall be used to pay benefits to the extent moneys in the unemployment compensation fund are insufficient to pay benefits during a calendar quarter.

Combined Trust Fund: This report uses this term to refer to the combined balances of the UI Trust Fund and the Iowa Reserve Fund. The term "fund balance" refers this Combined Trust Fund balance in this report. Solvency measures published by the federal government will not include the reserve fund. Solvency measures published by the federal government will not include the Iowa Unemployment Compensation Reserve Fund.

Other Definitions

Most other terms in this report are defined in the *UI Reports Handbook* and the *UI Data Summary* published by the U. S. Department of Labor. These definitions include:

Regular UI Benefits Paid: Unemployment benefits paid under the regular unemployment program. This figure does not include federal unemployment benefits, voluntary shared work benefits and special episodic programs such as Extended Benefits (EB) and Emergency Unemployment Compensation (EUC). (Source: ETA-5159)

Average Duration: The number of weeks compensated for the year divided by the number of first payments.

Exhaustion Rate: A rate computed by dividing the average monthly exhaustions by the average monthly first payments. To allow for the normal flow of claimants through the program, the denominator lags the numerator by 26 weeks,

First Payments: The first payment in a benefit year for a week of unemployment claimed under a specific UI program. (Source: ETA-5159).

Final Payments: The number of claimants drawing the final payment of their original UI entitlement. This is also called benefit exhaustions. (Source: ETA 5159)

Trust Fund Interest: The amount of interest earned on the Unemployment Trust Fund account. Interest paid by the U. S Treasury is credited on the notification date for this report. The interest rate paid to states is available at: http://www.treasurydirect.gov/govt/rates/rates_tfr.htm.

Voluntary Shared Work: Shared work is an unemployment insurance program that provides employers an alternative to laying off employees. To participate in this program, an employer must reduce the normal weekly hours of work for an employee in the affected unit by at least 20 percent (but not more than 50 percent). Employees who share the work under an approved Shared Work Plan collect a percentage of regular unemployment insurance benefits to compensate for reduced hours of work and wages.
